

AGRI-LINK DIGITAL MARKET ACCESS PLATFORM

Technical Report (Draft)

Prepared following the structure of the provided sample report. This draft begins from the equivalent of page two of the sample template.

Table of Contents

- Chapter 1. Introduction
- Chapter 2. System Analysis and Design
- Chapter 3. Implementation
- Chapter 4. Conclusion and Recommendations

Chapter 1. Introduction

Agri-Link is a digital agricultural marketplace designed to connect farmers directly with buyers across Rwanda. It provides product listings, market prices, communication, and lays the foundation for future payment, logistics, analytics, and notification services.

Problem Statement

Farmers have limited access to reliable markets while buyers struggle to locate trusted suppliers and current market prices.

Objectives

Connect farmers and buyers, improve price transparency, simplify ordering, and support future digital agricultural services.

Expected Outcomes

Improved market access, increased farmer income, better product visibility, and efficient agricultural trade.

Project Rationale

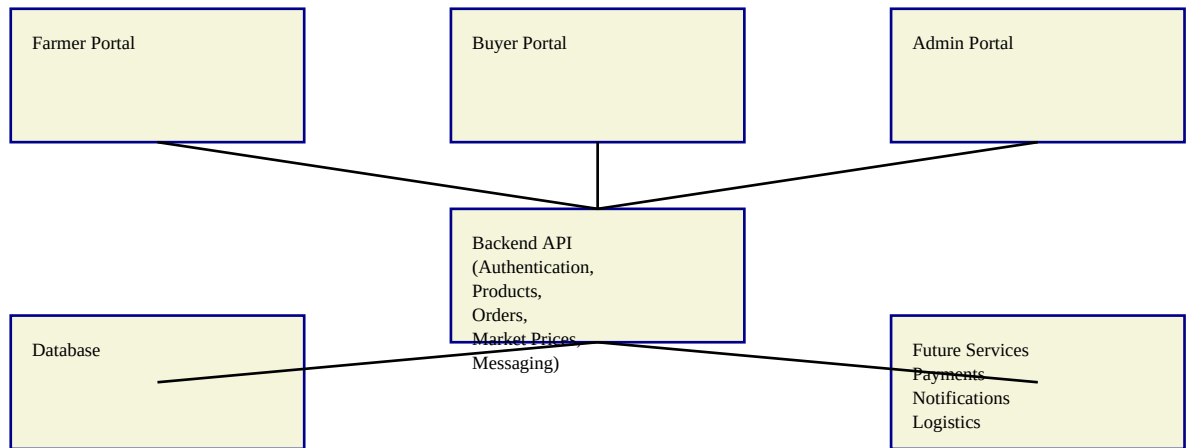

Support Rwanda's digital transformation by strengthening agricultural commerce through technology.

Chapter 2. System Analysis and Design

Intended Users: Farmers, Buyers and System Administrators.

Future Partners: MINAGRI, NAEB, District Authorities, Mobile Money Providers, Banks and Transport Companies.

High-Level Architecture

Database Overview (ERD Summary)

Entity	Relationship
Users	Own products / place orders
Products	Belong to categories
Categories	Contain products
Orders	Contain order items
Market Prices	Reference product categories
Messages	Buyer ↔ Farmer communication
Reviews	Buyer feedback

Chapter 3. Implementation

The current implementation focuses on the frontend using HTML and CSS. Implemented pages include the Landing Page, Marketplace, Market Prices, About Page, Login, Registration, Seller Dashboard and Buyer Dashboard. Backend APIs, authentication, database connectivity, payments and logistics will be implemented in future development phases.

Chapter 4. Conclusion and Recommendations

The project establishes a strong frontend foundation for a digital agricultural marketplace. Future work will focus on backend development, REST APIs, authentication, database integration, online payments, notifications, analytics and deployment.
